

# Public Disclosure - Patent Pending

## **Title: Innovative Reminder System Integrated with Google Maps**

This invention allows users to receive voice or visual reminders triggered automatically when starting navigation via Google Maps or similar navigation systems. The reminders are based on the type of destination (e.g., if going to the airport, remind user to carry passport).

It works by detecting navigation events from the mobile app, sending location and destination data to a backend, which analyzes context and returns smart reminders via app notification or voice assistant.

## **Patent Status:**

Patent Pending

U.S. Provisional Application No.: 63/848,786
